Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	10/612,184	MORIYAMA ET AL.
	Examiner Sheeba Ahmed	Art Unit 1773

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on _____.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-12 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-12 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 11/3/03.
- 4) Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) Notice of Informal Patent Application (PTO-152)
- 6) Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Chacko (US 6,617,377 B2).

Chacko discloses conductive compositions containing nanomaterials (Column 1, lines 9-11) and specifically comprising 5-30 wt.% of polymer resin and 1-20 wt.% carbon nanoparticles. The carbon nanoparticles may be carbon nanotubes (Column 2, lines 33-47). The polymer should have a high glass transition temperature and polyimides are preferred polymers (Column 3, lines 35-45). The nanoparticles are used in the range of 0.025-20 wt.% of the composition (Column 4, lines 61-65). The composition may be applied to a substrate and the wet film thickness is typically 40 microns (Column 6, lines 29-31). With regards to the surface electrical resistivity, the volume electrical resistivity, and the mechanical elongation, the Examiner takes the position that the conductive film taught by Chacko would inherently have the same electrical resistivity, the same volume electrical resistivity, and same the mechanical elongation given that the chemical composition and the structure, i.e., the thickness of the film, of the conductive film

taught by Chacko and that of the claimed invention are identical. All limitations of claims 1-6 are either inherent or disclosed in the above reference.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schlueter, Jr. et al. (US 6,201,945) in view of Chacko (US 6,617,377 B2).

Schlueter, Jr. et al. disclose a polyimide film containing electrically conductive doped metal oxide filler dispersed therein and wherein the polyimide film has a surface resistivity of from 10^4 to 10^{12} ohm/sq (Column 4, lines 3-7), a volume resistivity of from 10 to 1011 ohm.cm (Column 8, lines 50-60) and has a thickness of from about 25 to about 150 microns thick (Column 8, lines 41-45). The film is prepared by using a reaction product of a diamine and a dianhydride dissolved in a solvent, adding and dispersing an appropriate amount of filler, casting the mixture of a surface, removing the solvent by evaporation and heating to convert the polyamic acid to polyimide (Column 9, lines 15-30).

Schlueter, Jr. et al. do not disclose that the electrically conductive filler may be carbon nanotubes.

However, Chacko discloses conductive compositions containing nanomaterials (Column 1, lines 9-11) and specifically comprising 5-30 wt.% of polymer resin and 1-20 wt.% carbon nanoparticles. The carbon nanoparticles may be carbon nanotubes (Column 2, lines 33-47). The polymer should have a high glass transition temperature and polyimides are preferred polymers (Column 3, lines 35-45). The nanoparticles are used in the range of 0.025-20 wt.% of the composition (Column 4, lines 61-65). The composition may be applied to a substrate and the wet film thickness is typically 40 microns (Column 6, lines 29-31). Chacko specifically teaches that the mechanical and thermal properties of the film can be increased by the incorporation of materials of nano-dimensions and the function of the nanoparticles is to increase the polymer-filler interactions (Column 2, lines 48-60).

Accordingly, it would have been obvious to one having ordinary skill in the art to replace the electrically conductive doped metal oxide filler of Schlueter, Jr. et al. with the carbon nanotubes taught by Chacko given that Chacko specifically teaches that the mechanical and thermal properties of the film can be increased by the incorporation of materials of nano-dimensions and the function of the nanoparticles is to increase the polymer-filler interactions. With regards to the mechanical elongation, the Examiner takes the position that the conductive film taught by Schlueter, Jr. et al. and Chacko would inherently have the same the mechanical elongation given that the chemical composition and the structure, i.e., the thickness of the film, of the conductive film as taught by Schlueter, Jr. et al. and Chacko and that of the claimed invention are identical.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sheeba Ahmed whose telephone number is (571)272-1504. The examiner can normally be reached on Mondays and Thursdays from 9:30am to 6:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Jones can be reached on (571)272-1535. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
